Professional Summary

Computer Science graduate with knowledge of Python, Java, SQL, and web technologies, supported by hands-on experience in software development and academic projects. Strong understanding of data structures, algorithms, database management. Capable of developing efficient applications, collaborating in team environments, and applying technical skills to support organizational objectives.

Technical Skills

Programming Languages: Python, JavaScript, SQL

Web Technologies: HTML5, CSS3

Frameworks: Django, Flask

Databases: MySQL, SQLite

Core Computer Science: Data Structures, Algorithms, Object-Oriented Programming, DBMS

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook

Concepts: CRUD Operations, Authentication, Responsive Web Design, Version control

Projects

Academic Integrity Assurance System — Python, Django, MySQL, HTML5, CSS3, JavaScript

- Developed an Academic Integrity Assurance System with 6+ modules to detect plagiarism, cheating, and unauthorized collaboration in digital learning environments.
- Designed 5 core modules including authentication, violation tracking, reporting, analytics, and monitoring.
- Implemented a responsive web Interface using HTML5 and JavaScript, supporting 3 user roles (student, faculty, admin).
- Integrated backend using Python with a MySQL database (10+ tables) and automated monitoring workflows, reducing manual effort.

ATM Access Using card Scanner and Face Recognition with AIML — Python, OpenCV, Flask

- Developed an ATM security system using Python, Flask, OpenCV, Deep CNN, React.js, HTTP APIs, and SQL, enabling dual-factor authentication through card scanning and facial recognition.
- Trained a Deep CNN model achieving over 95% accuracy for real-time facial recognition and secure user authentication.
- Built a full-stack application with React.js frontend and Flask backend APIs, enabling seamless HTTP-based authentication workflow.
- Managed 1000+ user records and transaction logs using SQL database for secure storage and access control.

Internship and Training

Smart Irrigation — Edunet Foundation

- Designed a smart irrigation system using 1–3 soil moisture sensors and ESP32/Arduino to automate irrigation based on real-time soil conditions.
- Implemented control logic using 2+ sensor inputs to regulate pump and valve operations efficiently.
- Reduced water wastage by 35–50% by activating irrigation only when soil moisture drops below threshold levels.
- Enabled IoT-based remote monitoring via WiFi/GSM modules, automating 100% of watering cycles and improving irrigation efficiency.

Certifications and Achievements

- edGICT-Successfully completed edGICT-certified courses in AIML, Big Data, and Python, achieved performance-based digital badges.
- SAWIT.AI Learnathon Program – Generative AI Fundamentals — GUVI, AICTE, NASSCOM FutureSkills Prime.
- Recognised with the LPF Scholarship for 4 consecutive years for outstanding academic performance and leadership qualities.

Professional Training

- Completed professional training in IT Infrastructure Management, leadership, and workplace skills.
- Cleared ATA assessments in aptitude, quantitative reasoning, and analytical problem-solving, solving 100+ questions.

Education

Holy Mary Institute of Technology and Science

Bachelor of Technology in Computer Science and Engineering

2022 – 2026

CGPA: 8.8
